ABSTRACT

This is the third study conducted to analyze the transfer pattern of community college students in Pennsylvania. Information sources were student followup data from the community colleges and enrollment data of all higher education institutions. The followup data showed that the trend from 1970 through 1973 had been a rather consistent distribution of transfers among the various segments. In 1973, the percentages of transfers to the segments were: out-of-state, 12; state-owned, 25; state related, 37; state-aided, 6; private, 20. The most significant change was a doubling of the number of students transferring to the state-aided segment over the 4-year span. Of the 3,112 students transferring to state-owned or state-related schools, 1,242 transferred to state-owned institutions, and 1,870 transferred to state-related universities. State-related universities not only absorbed the largest number of community college transfers but also accepted a larger percentage as juniors. The study data are provided in 43 tables. (DB)

SUMMARY

Although enrollments at higher education institutions are expected to decrease, the community college segment will probably be the least affected by the declines. In the fall of 1973, the 54,449 students in Pennsylvania's 14 community colleges constituted an increase of 7.4 per cent over the previous year. In 1973, 4,420 community college students transferred to other higher education institutions in Pennsylvania.

This is the third study conducted by the Division of Research, Bureau of Information Systems, Pennsylvania Department of Education, to analyze the transfer pattern of community college students. Student follow-up data obtained from the community colleges as well as the enrollment data submitted to the Department of Education by all higher education institutions in Pennsylvania were used as information sources.

The reports of the community college follow-up studies of graduate transfers indicate that the trend from 1970 through 1973 has been a rather consistent distribution of transfers among the various segments. In 1973, the percentages of transfers to the segments were: out-of-state, 12; state-owned, 25, state-related, 37; state-aided, 6; private, 20. The most significant change was a doubling of the number of students transferring to the state-aided segment over the four-year span.

Reports on transfers by receiving institutions were available from only two segments, the state-owned and state-related. However, these two accounted for 70 per cent (3,112) of the total number (4,420) of the community college graduate and undergraduate transfers to institutions within Pennsylvania. Of the 3,112 students transferring to schools in these two segments, 1,242, or 40 per cent, transferred to state-owned institutions and 1,870, or 60 per cent, transferred to state-related universities. Of the 1,242 students transferring to state-owned institutions, 232 were freshmen, 570 were sophomores and 440 were juniors. The 1,870 transfers to state-related universities presented this distribution; freshmen, 265; sophomores, 604 and juniors, 1,001.

State-related universities not only absorbed the largest number of community college transfers but accepted a larger percentage of them as juniors. An analysis of graduate transfers at the junior level among the state-related segment suggests that the following conditions may exist: (1) more transfer students are being accepted without benefit of formal community college graduation, (2) a greater number of graduates entering the state-related segment are not current graduates and/or (3) the articulation process is such that more community college graduates are being accepted at full junior status.

The results of an admission requirements survey conducted by transfer counselors at the community colleges in 1973 are included in this study. Fifty-seven of the 78 receiving institutions responding to the survey indicate that each course the community college transfer student had taken is evaluated, as compared to institutional acceptance of the associate degree at the junior level. Therefore, there is bound to be great variation in the articulation between community colleges and four-year institutions.

Recommendations include another study of the transfer patterns for 1974, particularly since Commissioner Ziegler has issued an articulation policy to facilitate transfers. In addition, plans have been made to gather more complete data on admission requirements for transfers within Pennsylvania. It has also been

suggested that a longitudinal study of the quantitative and qualitative aspects of community college transfer students be undertaken to determine the number of students resuming their education after having "stopped out" for a period of time.

AN ANALYSIS OF PENNSYLVANIA COMMUNITY COLLEGE STUDENT TRANSFERS

Background

National surveys of higher education enrollment indicate that many colleges are currently experiencing minimal growth, no growth or declining enrollments. However, the national average for the fall of 1973 showed a four per cent growth over fall 1972 enrollments.[1] In Pennsylvania, the 1973 total enrollment was 2.4 per cent higher than 1972.

Table 1

Enrollments for 1972 and 1973 and Per Cent of Change[2]

Category of Institution	Enrollments 1972	Enrollments 1973	Per Cent Change
Total, All Institutions	437,920	448,629	+ 2.4
State-Owned	76,214	76,899	+ .9
State-Related	123,781	130,153	+ 5.1
Community Colleges	50,675	54,449	+ 7.4
Private State-Aided	37,735	38,157	+ 1.1
Private Colleges and Universities	134,433	134,261	- .1
Theological Seminaries	2,165	2,323	+ 7.3
Private Junior Colleges	5,039	4,522	-11.1
Proprietary Schools	7,878	7,865	- .1

The above table indicates the variations among the segments and verifies the high growth capabilities of the community colleges. The establishment of new community colleges, accessibility to population centers, availability of occupational programs and tuition which is lower than that of four-year institutions contribute to the higher growth rate of community colleges.

The first Pennsylvania community college began in Harrisburg in 1964 with 580 students. In the fall of 1973, there were 54,449 students in 14 community

[2] Our Colleges and Universities Today--Summer and Fall College Enrollments in Pennsylvania, Vol. XI, No. 1, Division of Educational Statistics, Bureau of Information Systems, Pennsylvania Department of Education, 1973, p. 4.

colleges.[3] Thus, it is evident that the phenomena of community college growth would influence other segments of higher education. Four-year institutions in Pennsylvania reported the following number of transfers from community colleges:[4]

Table 2

Number of Graduate and Nongraduate Community College Transfers to Pennsylvania Colleges and Universities as Reported by Receiving Institutions

Year	Transfers
1966	116
1967	764
1968	1,009
1969	2,070
1970	2,522
1971	3,498
1972	3,954
1973	4,420

As the number of community college students transferring to four-year institutions increased, it became apparent that upper-level colleges and universities would feel the impact. The emerging transfer pattern would indicate which colleges were absorbing the larger numbers of transfer students. Attention was also drawn to the problem of nontransferable credits occurring in the articulation process.

In 1970, a survey of graduate student transfers was conducted as an initial attempt to gather transfer data from the community colleges on a statewide basis.[5] The following year data was gathered for both graduates and students transferring before graduation.[6] Routine transfer data was obtained from state-owned and state-related receiving institutions, although no analysis report was prepared for 1972. Continued interest and queries regarding transfer patterns suggested the need for this report.

Procedures

Information concerning the transfer of community college students was obtained from two sources: follow-up reports submitted by the community colleges to the researcher, reports from state-owned and state-related colleges and universities submitted to the Division of Educational Statistics. Since neither the community college nor the receiving college had the comprehensive data available, both

[6] Zawadski, Alfonso S. and Agnes Martinko. Analysis of Transfer Patterns of Community College Students in Pennsylvania, Division of Research, Bureau of Information Systems, Pennsylvania Department of Education, 1972.

sources were used.

The community college data on student follow-ups was not 100 per cent complete, nor were student responses 100 per cent accurate as some students didn't answer queries while others indicated an intent that never became an actuality. Transfer enrollment figures from the receiving institutions were much more accurate, but this data was available only from state-owned and state-related institutions. And, the receiving institutions' reports do not distinguish between graduate and nongraduate transfers, whereas the community college reports do.

Distinguishing between graduate and nongraduate transfers helps to pinpoint graduates accepted into four-year institutions at less-than-junior standing. This occurs when four-year schools fail to accept credits earned at the community college due to either course content or when a student receives a below average or "D" grade for the course. Transfer analysis data helped illuminate articulation problems between institutions as well as between students and institutions. Therefore, an additional aspect of this transfer analysis is the inclusion of admission requirements for the receiving institutions. This portion of the report shows the extent to which the receiving institutions were accepting "D" grades, credits, associate degrees and other related information.

Discussion

The number of graduates reported by the community colleges as transfers to four-year institutions increased from 1,753 in 1969-70 to 2,796 in 1972-73. The variance of graduate transfers to the different types of institutions over the past four years is presented in Table 3.

Table 3

Graduate Transfers Reported by Community Colleges Through Student Follow-up Procedures Showing the Number and Per Cent of Graduates by Institutional Category[7]

Type of Institution	1970	Per Cent	1971	Per Cent	1972	Per Cent	1973	Per Cent
Out-of-State	267	15	329	15	291	11	332	12
State-Owned	457	26	636	29	792	29	709	25
State-Related	641	37	723	33	974	36	1,036	37

Private	328	19	446	20	446	17	562	20
Total	1,753	100	2,208	100	2,695	100	2,796	100

[7]Data collected and supplied by the community colleges.

Trend in Transfers to Types of Institutions

As Table 3 indicates, the trend set by the graduates to the various types of institutions in 1969-70 has remained relatively constant. A plurality of the graduates (37 per cent in 1973) transferred to state-related universities. Out-of-state migration for 1971-72 and 1972-73 dropped a few percentage points. Perhaps, the most significant change was the doubling of the percentage of community college graduates transferring to state-aided institutions in the last two years. The state-aided institutions receiving the greatest number of community college graduate transfers were Drexel University (43), University of Pennsylvania (43) and Philadelphia College of Textiles and Science (36).

A breakdown of 1971-72 graduate transfers is shown in Appendix I, Table 8, p. 11. The 1972-73 figures are shown in Appendix II, Table 9, p. 16.

Transfers Reported by Receiving Institutions

Information gathered by the Division of Educational Statistics from the receiving institutions presents another perspective of the community college transfer pattern, even though the data is available only from state-owned and state-related segments for 1971 to 1973. No distinctions are made as to whether the transfer students were graduates or were transferring without a degree. Transfers were classified by the receiving institution as freshmen, sophomores or juniors. A few receiving institutions reported transfers as seniors. However, since their numbers are insignificant (14 in 1973) and represent atypical situations, senior transfers were eliminated from the trend analysis tables.

Table 4

Community College Transfers as Reported by Receiving Institutions in 1970-1973 Showing Class Standing and Percentage Equivalent for the State-Owned and State-Related Colleges and Universities[8]

Institution	1970	Per Cent	1971	Per Cent	1972	Per Cent	1973	Per Cent

Total	1,673	100	2,399	100	2,830	100	3,112	100

Table 4 shows the transfer pattern as reported by the receiving institutions. The data represent actual college registrations by class standing at the receiving

[8] Op. cit., Supplemental Enrollment Data from Form DEAS 415.

institution. Although data were available from only the state-owned and state-related colleges and universities, approximately 75 per cent of the community college transfers did transfer to institutions in these two categories. A distinction between graduate and nongraduate transfers, however, was not possible from the data presented from this source.

In 1970, the state-owned and state-related segments were accepting an almost equal number of community college transfers. This proportion shifted to a two percentage-point differential (178 students) in favor of the state-owned colleges in 1971. In 1973, however, 40 per cent of the community college transfer students in these categories went to state-owned institutions, while 60 per cent went to state-related universities. The state-owned institutions accepted 844 community college transfers in 1970. This number increased to 1,242 in 1973 for a growth rate of 49 per cent. On the other hand, the state-related universities transfer acceptance increased from 829 in 1970 to 1,870 in 1973. This constituted a growth rate of 126 per cent.

Transfer Matrix

Table 5 shows where community college students transfer from and where to. Within the state-owned segment, Kutztown State College received the most transfers from community colleges (189), whereas Cheyney received the least (21). Temple far exceeded the other state-related universities with the acceptance of 1,005 community college transfers.

The Community College of Philadelphia had the largest number of transfers: 524 to state-related institutions and 34 to the state-owned segment. Of the 524 state-related transfers, 479 were accepted by Temple and constituted approximately half of the total community college transfers to Temple. A general observation is that community college students tend to transfer to institutions close to their community college.

Transfers by Academic Standing

A complete listing of 1971-1973 transfers by academic standing for each community college is contained in Appendix III, Tables 10-23, pp. 21-34. Conversely tables for each state-owned college show the distribution of community college transfers received by that institution in Appendix IV, Tables 24-37, pp. 35-48. Tables showing the distribution of community college transfers to state-related universities are in Appendix V, Tables 38-42, pp. 49-53.

Not only are the state-related universities absorbing the largest number of community college transfers, but they are accepting a larger percentage of community college graduate transfers at junior standing than the state-owned institutions. Table 6 illustrates the comparison of these two segments.

As noted, community college follow-up data do not always represent 100 per cent of the graduate population, partly because of the difficulties inherent in conducting follow-up surveys and partly because a student's intent does not always translate into an actual registration at the college indicated. The number of community college transfers at the junior level at the receiving institutions, however, does not necessarily refer only to "graduates" or to those students making a direct transfer from a community college. For instance, a student may satisfactorily obtain enough credits for community college graduation but decide not to pay the fees to go through the graduation ceremony when acceptance is already assured at the four-year institution. Also, a student may opt to work full time or serve in the military before continuing his/her education at the four-year

Year	Follow-Up Reporting	Institutional Acceptance	Per Cent	Follow-Up Reporting	Institutional Acceptance	Per Cent
1970	457	201	44	641	654	102
1971	636	504	79	723	785	109
1972	792	456	58	974	831	85
1973	709	440	62	1,036	1,001	97

In spite of these difficulties, a relationship can be expected between student intentions and actual junior-year enrollments at the four-year institutions. But, as Table 6 indicates, the ratio between follow-up data and institutional acceptance data is far closer in the state-related segment. In fact, for 1970 and 1971 more community college transfer students were accepted at the junior level than community college follow-up studies indicated. These closer ratios in the state-related segment might be attributed to: (1) more transfer students being accepted at junior standing without benefit of community college graduation, (2) a greater number of graduates entering the state-related segment who are not current graduates and/or (3) the articulation process in the state-related sector is such that more community college graduates are being accepted at full junior status.

Articulation Policies

The last possibility suggests selectivity. Those students who pursued an academic transfer program and were successful, so that no articulation problems arose, may be the students who most often chose to attend a state-related university rather than a state college. A policy was issued by Commissioner of Higher Education Jerome M. Ziegler on December 7, 1973 (Appendix VI, p. 54) to the state college and university presidents to facilitate the articulation process between community college graduate transfers and the state-owned segment.

Transfer counselors at the community colleges have been concerned about the difficulties students were having in the articulation process as they transferred from the community college to the four-year institution. Therefore, in order to be better prepared to counsel students, information was gathered from the receiving institutions concerning admission requirements and procedures for community college transfer students. Appendix VII, p. 55, lists the items on the questionnaire pertaining to transfer requirements, whereas Appendix VIII, Table 43, pp. 56-60, shows the individual responses to each item for the responding Pennsylvania institutions. Table 7 indicates the completeness of the response by segment.

[9]Combination of Table 3 and Table 4 data.

Table 7

Responses by Segment to Survey of Admission Requirements for Community College Transfers

Segment	Number of Institutions	Number Responding to Survey
State-Related	4	3 (Penn State Capitol Campus listed separately)
State-Owned	14	13
State-Aided	13	5
Private	78	57
Total	109	78

In responding to the question of grade point average, institutions in all segments indicated most frequently that a 2.0 would be considered but that a 2.5 was preferred. Only 17 institutions stated that they would not accept the grade point average (GPA) computed by the community college. Sixteen colleges and universities specified different GPA for specialized curricula.

The acceptance of a maximum of 60 credits was the modal response. However, 13 schools indicated an acceptance of 90 credits and four schools will accept a maximum of 98. Only 21 institutions responded to the question of a minimum number of credits required for acceptance as a transfer. Of these, six schools stated the minimum as 30 hours. The range was from to 6 to 60. Seventy institutions indicated that an associate degree was not a prerequisite for transfer.

Fifty-seven institutions indicated that they evaluated each course rather than accept the associate degree as an academic entity. Transfer students are required to submit SAT or ACT scores at 38 colleges. However, if these tests were not taken, college performance will suffice in lieu of test scores, 55 of the responding institutions said. In addition, 70 receiving schools state that high school transcripts are required for community college transfer students with 30 credits or more as well as those with associate degrees.

Forty-six responding institutions require the transfer student to have had the same high school courses as entering freshmen (e.g., foreign language, math), though 35 will allow college courses to satisfy these requirements. College courses acquired to satisfy admission requirements are also credited toward the baccalaureate at 21 schools.

Forty-seven colleges and universities will not accept credit for "D" grades at the time of transfer for community college graduates and 59 institutions will not accept credit for "D" grades for nongraduate transfers. However, receiving institutions indicated they allow credit for examination at the college (33), CLEP general (35), CLEP subject (51), armed services (29) and pass-fail courses (49).

It becomes quite apparent, therefore, that an associate degree does not

necessarily guarantee that a community college transfer student will be accepted as a junior at the receiving four-year institution. In some cases veterans' education benefits were withheld or lost where a student transferred to a four-year institution at a lower class standing. Credit loss may be the result of a student's particular choices or performance. However, if credit loss is due to articulation difficulties arising from institutional processes, students can be helped. If students must take additional courses simply to fulfill admission requirements, then the students' time and money are not spent in their best interest.

Conclusion

While the prospects for growth in the total spectrum of postsecondary education may be rather dim, the growth of the community college sector is a rather safe assumption. A spin-off of this growth pattern is the potential increase of community college students transferring to four-year colleges and universities. Those institutions receiving a large number of transfer students will, undoubtedly, be aware of this occurrence and take steps to facilitate the students' progress toward their educational goals. Institutions not attracting many community college transfers may want to find out why not.

The transfer pattern of community college students is of concern to the State Department of Education as well as to individual institutions. Are public four-year institutions available to those students who wish to transfer to a four-year college within commuting distance of their homes? Are programs at the two-year and four-year college finely meshed so that the community college transfer experiences a learning continuum? Is there dialogue between receiving institutions and the community colleges to facilitate the student's articulation process? Should new kinds of programs be developed for the two-year student at the four-year institution? Is there a need for concentration by the institutions on the upper-division student? Are the needs of occupational students who wish to continue their education being met? These are all questions relevant to the impact of community college transfers on higher education in Pennsylvania.

When analyzed by segment, the transfer pattern has varied little in the last four years. However, 1974 data would be expected to reflect any change occurring as a consequence of the Commissioner's articulation policy memo to the state-owned colleges and university. For this reason alone, an analysis of the transfer patterns should continue.

In addition, the transfer counselors of the community colleges will attempt to gather more complete data on admission requirements for their students. A copy of the form used to survey receiving institutions is included in Appendix IX, p. 61. The collected data for the state will be processed and published by the Division of Research, Pennsylvania Department of Education.

Another phase of the community college transfer pattern that should be investigated in a longitudinal study is how this function reflects the changing role of higher education. "College" is no longer the place where the youth of the financially elite go "off to" in order to prepare for a lifetime career. The practice of dropping in or out of a formal learning situation without any stigma attached to the person or the institution is being encouraged. We need to know how many students return to college after a span of time away from school and what conditions induce them to return.

The majority of community college students who transfer to four-year institutions tend to transfer within a commuting distance. The study did not determine whether the reasons are financial, curricular or due to the characteristics of the students. But, more people are getting their education closer to home. Therefore, if community colleges are most ideally situated to provide access to lifelong education needs, then the extent to which this is taking place should be examined.

Commonwealth of Pennsylvania
Department of Education

HIGHER EDUCATION CIRCULAR 3

DATE ISSUED	December 7, 1973
NUMBER OF SHEETS	1
DATE EXPIRES	Indefinitely

THIS MATERIAL MAY BE REPRODUCED

Subject: Articulation

To: State College and University Presidents - 3
Community College Presidents - 3

From: Jerome M. Ziegler
Commissioner of Higher Education

Subsequent to endorsement by the Commission of Community College Presidents and the Board of State College Presidents, the Board of State Colleges and University Directors on September 20, 1973 adopted a policy on articulation to be followed by each state college and university accepting transfer students who are holders of an associate degree awarded by a publicly supported two-year college in Pennsylvania.

I request that the presidents of the state colleges and university instruct admission personnel and faculty to implement this policy immediately.

POLICY ON ARTICULATION

1. Since the completion of an associate degree demonstrates a student's motivation to complete a baccalaureate degree, preference for admission to state colleges should be given to applicants who have completed said degree.

2. A transfer student who has completed a two-year degree program should normally expect to complete a baccalaureate program in two additional years. In certain specialized programs of the receiving institution a longer period may be necessary.

3. The "D" grade obtained by two-year college students should be treated by the senior institution in the same manner as the senior institution treats the "D's" of its indigenous students.

4. Secondary school transcripts as well as test scores should be considered as a guidance tool and not a determinant of transfer to the for-year institution. The awarding of the associate degree is considered to have satisfied the high school graduation requirements.

Appendix VII

Admission Requirements for Community College Transfer Students at Receiving Institutions in Pennsylvania

(Below are the items that appeared on a College Transfer Data Sheet that was distributed by the community colleges to the receiving institutions.)

1. What grade point average (4.0 scale) do you consider? 1A Prefer? 1B
2. Will you accept the G.P.A. as computed by the two-year college? 2A
   With associate degree? 2B
3. If different averages are required for different curricula, please specify 3
4. Maximum number of credits accepted in transfer? 4
5. Minimum number of credits required for transfer? 5
6. Is associate degree required? 6A Preferred? 6B Exceptions? 6C
7. Do you accept the associate degree? 7A or evaluate each course? 7B
8. Must the SAT or ACT scores be submitted by transfer students? 8
9. If SAT or ACT have not been taken, will college performance suffice? 9
10. Must the high school transcript or GED be submitted by student with associate degree? 10A 30 credits or more? 10B
11. Is the transfer student required to have had the same high school courses as entering freshmen? (e.g., foreign language, math) Yes 11A No 11B
12. If yes, can these be satisfied by college courses? 12
13. Will these courses also be credited toward the baccalaureate? 13
14. Are D's transferable--With Degree? 14A Without Degree 14B Explain 14C
15. Will you accept credits earned--by examination at the community college? 15A
    CLEP, General? 15B, Subject? 15C Armed Services? 15D Pass-Fail? 15E
